**(57) Abstract:** The present invention relates to a constant velocity universal joint comprising two shafts (1, 2) each having a claw (3, 4) located on one end. First and second hinge elements (5, 6) are rotatably mounted between the claws (3, 4). A cage (7, 8) is also provided which can reciprocate with respect to the hinge elements (5, 6) in the direction of the hinge axis (H).
